

Vocational Education in Health Care B.A. - Hof University — Hof University

Source: <https://www.hof-university.com/studying-at-hof-university/our-degree-programs/vocational-education-in-health-care-ba.html>

Within the framework of the part-time study program Vocational Education in Health Care, you will be qualified professionally and personally to work as a teacher or practical instructor in schools or practical training locations in the health care sector.

You will study subjects from the three module groups with corresponding ECTS:

Medical-scientific basics,

Specialized sciences of the health care professions,

Pedagogy, didactics and subject didactics

Thus, our study program complies with the requirements of teacher education of the ministries of education and cultural affairs (e.g. those of the Ministry of Education and Cultural Affairs of Bavaria) and the recommendations of the Standing Conference of the Ministers of Education and Cultural Affairs of the Länder in the Federal Republic of Germany on teacher education.

You are studying part-time.

Your studies are composed of:

Attendance at block courses at our campus in Kronach, which take place on average once a month (Friday and Saturday) and

guided self-study, in which you deal in depth with the contents you have learned.

The standard period of study is ten semesters. Since competences from your previous vocational training are recognised within the scope of up to 90 ECTS - this corresponds to the achievements to be made in semesters 1 to 3 - you already start in the 4th semester. As a rule, your studies will last seven semesters on a part-time basis. In addition, the compulsory internship can often be completed during or towards the end of the degree programme, so that a reduction to e.g. six semesters is possible.

On the basis of your previous experience from training in the healthcare sector, we can start directly with you in the in-depth examination in the modules:

Medical-scientific basics and

Specialized sciences of the health care professions

These will be supplemented with modules in the area of pedagogy, didactics and subject didactics which are important for you as a later teacher / practice supervisor.

The degree program qualifies you to work as a teacher / practical instructor in the healthcare sector.

In the first level of professional qualification, which you acquire with the Bachelor of Arts in Vocational Education in Health Care, you will often be employed in the so-called "practical content" and "teaching sequences" after graduation. (Please note the special features of the different federal states!)

Another area of application for you - as a well-trained pedagogue - is in the field of in-company education, e.g. as a practical instructor or in the field of further education.

Universities are also looking for well-trained educators with a professional background.

Other employers, such as industry, health insurance companies, but also fields of activity in health education are open to you with the completion of your pedagogy studies.

What you need to bring with you:

Successfully completed training in the healthcare sector, ideally with professional experience, as well as university entrance qualification, e.g. (technical) high school diploma or at least 2 years of vocational training with at least 3 years of full-time professional experience.

More information on how to enter university without a high school diploma with a university entrance qualification from a professional background

The tuition fees amount to 11,690 €. This corresponds to a monthly tuition fee of 278,33 € for a standard study period of 7 semesters.

For this you will receive:

a high-quality education recognized by the Bavarian Ministry of Education and Cultural Affairs as a teacher / practical instructor in the healthcare sector at a state university,

additional certificates, such as the Skills Trainer or POL Tutor,

drinks and snacks during your stay with us at the Kronach campus and

an exclusive ambience at our modern campus in Kronach.

Our joint success story

Vocational education also lives from its role models.

Expert lecturers and the exchange of experiences, e.g. on the learning process support of learners, in presence are indispensable!

This is exactly what we offer at Campus Kronach of Hof University!

"The demand to combine professional life, family, hobbies and studies is a challenge. I have been accompanying students and employees on this path for 13 years now! Let us go your way together!" (Prof. Dr. phil. Matthias Drossel - Head of Program)

Vocational Education in Health Care

Winter semester: May 1 - July 15

Summer semester: November 15 - January 15

Information und Service

More good reasons to study with us

Competence-oriented learning support in an attractive, modern environment

Lecturers from the field, who themselves accompany learners daily in theory or practice

Well supplied through the lecture day: drinks & snacks included.

Compatibility of job, family, hobbies and studies through a part-time structure

Campus Kronach: Study where others go on vacation!

Did you know? We are very easy to reach by train and only 8 minutes walk from the train station!

The Department of Interdisciplinary and Innovative Sciences at the Lucas Cranach Campus in Kronach offers you a study program that focuses on innovation and an interdisciplinary approach. The Department of Interdisciplinary and Innovative Sciences offers teaching and research in areas that require a high degree of interdisciplinary work and are characterized by innovation.

More about Campus Kronach

living and housing

library

spare time

In this module, which primarily prepares you practically for learning process support, with over 40 ECTS, you will learn contents such as:

Educational Science,

Subject didactics I, II and

educational psychology

Trying out and practicing together - this is how we make competence orientation tangible. Our goal: to make learning visible!

We also teach additional skills, e.g. intercultural cooperation, skills trainer training, POLtutor.

Do you want to prepare your lessons in such a way that they correspond to the current professional knowledge and the added value of scientific findings for the best possible care in the health care system becomes clear?

Specialized sciences are the basis for this!

We show you

how you can use your discipline as an important professional feature and

include the other disciplines as a reference science, e.g. in your teaching preparations.

Anatomy, physiology, diagnostics and therapy - the most widely used reference science in lesson preparation is medicine.

In this module you will acquire the necessary medical pedagogical competence to prepare medical content didactically.
